

ASSIGNMENT 2:

Create a simple “**Student Result Management System**” that:

1. Accepts a student’s name and marks for 3 subjects
2. Calculates the total and average
3. Displays whether the student passed or failed
4. Uses a loop to allow multiple students to be entered
5. Uses at least one function

Submission Requirements:

Submit your GitHub repository link before Sunday midnight.

Bring a **handwritten** explanation of your code on Monday.

Handwriting must be clear and readable. I will check it carefully.

I will personally check whether your program runs correctly on your laptop.

Good luck
